

Instructions - Gravity Track

Fully assembled track:

1. Lay out all of the sections of track. The section with the bolts protruding from the bottom goes at the start of the track, the section with the curved end goes at the end.
2. Overlap the different sections of track. Attach each section of track to the next section of track with the included bolts and wing nuts.

3. Set up the step ladder. Lift the start of the track up so that the bolts at the bottom of the track can be inserted into the rings at the top of the step ladder.

4. Secure the bolts under the track with the larger wing nuts.

Instructions - Gravity Track

5. Insert the piece of wood underneath the track to help provide support.

6. Use the wooden block (i.e. the one that's attached to the ladder) as your starting block.
